VALUE-ADDED COURSE
CAPSTONE PROJECT

AI Digital Marketing Plan

For Velan Bakery

A practical, customer-focused plan to help a local bakery improve its online visibility, communicate its products and learn from marketing results.

Project report with implementation outline and GitHub repository details

1. Executive summary

Velan Bakery is the local business selected for this capstone project. This report proposes a simple digital marketing approach that uses AI tools to help plan content, draft copy and review performance. The plan focuses on useful, appealing communication about the bakery and its products, while keeping business facts accurate and under the owner's control.

The first phase is to confirm the bakery's location, hours, product range, contact details and preferred ordering method. Then the business can publish a consistent set of posts, make it easy for nearby customers to find accurate information, and track basic outcomes such as enquiries, directions requests and offer redemptions.

Project objective

Design a low-cost, measurable digital marketing plan for a local bakery, and demonstrate how AI can support content creation without publishing unverified claims or replacing human review.

2. Business and audience

Business profile

Velan Bakery is treated in this project as a neighborhood bakery. Specific details such as address, opening hours, signature products, pricing and delivery options were not provided. They must be confirmed with the owner before this plan is used publicly.

Area	Working assumption / action
Business	Velan Bakery; local bakery serving nearby residents and visitors.
Products	Confirm actual menu, availability, prices and dietary information with the owner.
Service area	Define the neighborhood and realistic pickup/delivery radius.
Brand voice	Warm, local, clear and welcoming; adjust to the owner's preference.
Primary audience	Nearby households, students, workers and people buying snacks or celebration items.

Customer needs

Potential customers need to know what is available today, where the bakery is, when it is open, how to place an order and whether an item is suitable for a particular occasion. Clear, current information can reduce friction and help customers decide to visit or contact the business.

3. Goals and strategy

Goal	Initial measure	Review
Improve local discovery	Profile views, direction requests, calls or messages	Weekly
Increase useful engagement	Saves, shares, comments and relevant questions	Weekly
Encourage visits or orders	Offer redemptions or enquiries attributed to a post	Monthly
Build a repeatable workflow	Posts published and owner approval completed	Weekly

The first two weeks should establish a baseline rather than promise a fixed sales increase. After that, compare results with the baseline and continue the content that attracts meaningful local interest.

Channel plan

Channel / asset	Role	Content examples
Business listing on maps/search	Help customers find accurate address, hours and contact information.	Updated hours, phone, location, current photos, holiday changes.
Social media page	Show products and build conversation with nearby customers.	Fresh-bake photos, product highlights, short videos, customer questions.
Messaging / phone	Make enquiries and orders easy to handle.	Clear contact button and an agreed response process.
In-store prompt	Connect offline visits to online updates.	Small sign inviting customers to follow the bakery page or share feedback.

AI-assisted workflow

• Ask an AI writing assistant for several caption drafts based only on details supplied by the bakery.
• Use an AI design or editing feature to prepare a simple post layout, with permission for any customer or staff photos.
• Check every caption for correct product names, prices, ingredients, availability, opening hours and contact details.
• Have the owner approve content before publishing. Do not enter customer personal information into public AI tools.

AI supports drafting and organization; the bakery remains responsible for accuracy, consent and final decisions.

4. Four-week content calendar

Week	Post idea	Suggested call to action	AI use
1	Introduce the bakery and share an approved photo of the storefront or team.	“Visit us at [confirmed address].”	Draft three friendly introductions; owner picks one.
1	Highlight one confirmed popular product with a close-up photo.	“Ask us what is fresh today.”	Generate caption options from verified product facts.
2	Show a behind-the-scenes preparation moment, with staff consent.	“Follow for more bakery updates.”	Suggest a short video script and shot list.
2	Share a customer FAQ: hours, location or ordering process.	“Message/call [confirmed contact].”	Turn owner-approved answers into a concise FAQ.
3	Feature a seasonal or celebration item if actually available.	“Contact us to check availability.”	Adapt copy for a post and story.
3	Share a poll or question about customer preferences.	“Tell us what you would like to see.”	Draft neutral poll choices.
4	Post a weekly product roundup or fresh-bake update.	“Visit today; availability may change.”	Create reusable copy template with date field.
4	Thank customers and invite feedback.	“Leave a review / send us feedback.”	Draft a polite thank-you; no invented testimonials.

Posting frequency should match the owner’s time and the bakery’s actual supply. Begin with two or three useful posts each week and keep information current. Avoid claiming an item is available until availability is confirmed.

Sample caption (edit before posting)

“Fresh from the oven at Velan Bakery: [verified product name]. Available [confirmed time / while supplies last]. Visit us at [address] or contact us at [phone / page link] to check today’s selection.”

This is a template only. Replace every bracketed field with information confirmed by the bakery.

5. Measurement and improvement

Record a small set of outcomes once a week in a spreadsheet or notebook. Use the same time period and definitions each week. Ask customers, where appropriate, how they heard about the bakery; do not collect unnecessary personal information.

Metric	How to record it	Decision
Reach / views	Use the platform’s weekly summary.	Which topics are being seen?
Engagement	Count saves, shares, comments and relevant messages.	Which posts are useful to customers?
Enquiries / actions	Track calls, direction requests, messages or offer code use if available.	Did content prompt a next step?
Effort	Minutes spent preparing and responding.	Can the plan be maintained?

6. Implementation and responsibilities

Stage	Tasks	Owner
Preparation	Confirm business facts, consent for images, brand voice and contact method.	Student + bakery owner
Setup	Review / create suitable business and social profiles; complete accurate information.	Bakery owner, supported by student
Weekly planning	Choose topics based on real products and availability; draft with AI if useful.	Student
Approval and publishing	Fact-check text and images; owner approves; publish and respond.	Bakery owner
Review	Record measures, discuss what worked, revise next week's plan.	Student + bakery owner

Responsible use

• Do not invent reviews, awards, discounts, product ingredients, nutrition claims or customer stories.
• Get permission before sharing identifiable customer or staff images.
• Check AI-generated text, images and designs for errors, misleading details and unsuitable content.
• Use only real, approved product photos when a post is intended to represent the bakery's actual products.
• Protect account passwords and customer information; use authorized account access.

7. Expected outcomes and limitations

The plan is expected to create a more consistent publishing routine, make essential business information easier to find and provide a basic way to learn which topics customers respond to. Outcomes depend on the bakery's confirmed facts, the quality and consistency of execution, local demand, customer service and the time available to maintain the channels. This report does not claim measured business growth; results should be evaluated after implementation.

8. Conclusion

AI can help Velan Bakery prepare marketing drafts efficiently when the bakery provides accurate information and reviews every result. A modest, regular plan centered on real products, clear customer information and simple measurement is a practical starting point for local digital marketing.

9. Student completion details

Field	Complete before submission
Student name / ID	[Enter your name and ID]
College / department	[Enter college and department]
GitHub repository URL	[Paste your public repository link here]
Project code / files	Add your code, README and this PDF to the repository.
Acknowledgement	Add any course, mentor or tool acknowledgements required by your college.

GitHub submission checklist

• Create a GitHub repository with a clear name, for example ai-digital-marketing-velan-bakery.
• Add the project code and a README explaining the project and how to view or run it.
• Upload this report PDF to the repository (for example, into a folder named report).
• Copy the repository URL and paste it into the field above in your final report copy, then upload the updated PDF.
• Open the repository link in a private/incognito browser window to confirm the coordinator can access it.
• Submit the repository link and PDF using the Google Drive link provided by your coordinators.

Note: This PDF is the report document. Your college may also expect a working project/code demonstration in the GitHub repository.
